Abstract of Information Available

Human remains representing at least 14 individuals have been identified from Walkers Landing (8NA28), of Nassau County, Florida. The 22 associated funerary objects include a pink mound fill which corresponds to the Bullen publication description of the burial mound context, a shell labelled “Burial 2”, as well as several faunal bones and shells. Walkers Landing (Acc. 74–43;82–13; 73–20; S–164–172; FM EAP 0115), also referred to as Walker Point, was excavated in 1971 by E. Thomas Hemmings of the Florida Museum of Natural History (Hemmings and Deagan 1973). The site had been heavily disturbed by relic hunters prior to Hemmings' excavations which were carried out under the auspices of the landowners. In addition to the burials excavated (some disturbed) fragmentary bones were found in the relic hunters' spoil. Identification of select skeletal elements was made by Adelaide K. Bullen (1973). The FLMNH undertook building wide fumigation with Vikane (sulfuryl fluoride) several times since this collection has entered the museum. No other exposure to potentially hazardous substances is known to FLMNH.
