DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM07-18-000]

Elimination of FERC Form No. 423; Notice Providing for Termination of Collection of FERC Form No. 423

March 28, 2008.

On March 11, 2008, the Commission issued a Final Rule in the above-referenced proceeding, amending its regulations at 18 CFR 141.61, to eliminate the collection of the FERC Form No. 423, "Monthly Report of Cost and Quality of Fuels for Electric Plants" (Form 423), 122 FERC ¶ 61,225 (2008). The Commission stated that it intended to cease collection of the Form 423 ending with the December 2007 report, which was due February 15, 2008, but that it would coordinate its actions with the Energy Information Administration's (EIA) collection of this data on its newly authorized EIA-923, "Power Plant Operations Report" to ensure that there would not be a break in the monthly collection of data. EIA has indicated that it will begin the collection of its EIA-923 starting with the January 2008 report.

The Commission by this notice therefore announces that it has terminated collection of the Form 423 ending with the December 2007 report, which was due February 15, 2008.

Kimberly D. Bose,

Secretary.

SUPPLEMENTARY INFORMATION:

I. Summary of Information About the Integrated Risk Information System (IRIS)

IRIS is a database that contains potential adverse human health effects information that may result from chronic (or lifetime) exposure to specific chemical substances found in the environment. The database (available on the Internet at <http://www.epa.gov/iris>) contains qualitative and quantitative health effects information for more than 540 chemical substances that may be used to support the first two steps (hazard identification and dose-response evaluation) of a risk assessment process. When supported by available data, the database provides oral reference doses (RfDs) and inhalation reference concentrations (RfCs) for chronic health effects, and

oral slope factors and inhalation unit risks for carcinogenic effects. Combined with specific exposure information, government and private entities can use IRIS data to help characterize public health risks of chemical substances in a site-specific situation and thereby support risk management decisions designed to protect public health.

II. Workshop Information

Members of the public may attend the workshop as observers, and there will be a limited time for oral comments from the public. Please let ERG know if you wish to make comments during the workshop by registering on the Web site at <https://www2.ergweb.com/projects/conferences/peerreview/register-thallium.htm> and indicating your intent to make oral comments. Space is limited, and reservations will be accepted on a first-come, first-served basis.

Dated: April 1, 2008.
