The EIS will describe the TAPS design features, mechanisms of impact, emissions and effluents, pollution prevention and waste management, monitoring (including surveillance and maintenance programs), spill prevention and response, and mitigation measures. The EIS will also address the indirect and cumulative impacts associated with oil and gas production, including future development on Alaska's North Slope, and shipment of those products to market. The EIS will include a statement of the purpose and need for the proposed action, including the contribution that the continued use of the TAPS to support North Slope oil production makes to the nation's oil supply, economy, balance of payments, and energy security. Applicable Federal, State, and local statutes and regulations, with international agreements, and required Federal and State permits, consultations, and notifications will be presented.

The public is encouraged to contact the BLM with information and comments on specific issues they believe should be addressed in the EIS. The agency requests information and comments on wildlife, subsistence, and other resources along the pipeline route and in areas indirectly impacted by the pipeline both on the North Slope and along marine transport routes associated with oil and gas development on Alaska's North Slope. The BLM seeks information and comments on the current and past operation of the TAPS and ideas for enhanced operation and maintenance.

Comments are also sought on potential conflicts with approved coastal management plans (CMPs) and other land use plans that may result from the BLM's decision on the renewal of the TAPS right-of-way. These comments should identify specific policies of concern as listed in CMPs or other plans, the nature of the conflicts foreseen, and steps that the BLM could take to avoid or mitigate the potential conflicts. Comments may be in terms of broad areas or restricted to specific areas of concern.
