

products of spring and fall Crab Plan Team meeting; (3) process information requirements for Data Quality Act and National Standard Guidelines; (4) stock assessment and catch data; (5) progress with revising overfishing definitions; (6) update on crab rationalization; and (7) plans for and scheduling summer/fall 2004 meeting.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Gail Bendixen, 907-271-2809, at least five business days prior to the meeting date.

Dated: April 22, 2004.

Alan D. Risenhoover,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[I.D. 042104A]

North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Pacific Northwest Crab Industry Advisory Committee will meet in Seattle, WA.

DATES: The meeting will be held on May 12, 2004, beginning at 9 a.m.

ADDRESSES: The meeting will be held at the Alaska Fisheries Science Center, 7600 Sand Point Way NE., Building 4, Room 2076 (Jim Traynor Seminar Room) Seattle, WA.

Council address: North Pacific Fishery Management Council, 605 W. 4th Ave., Suite 306, Anchorage, AK 99501-2252.

FOR FURTHER INFORMATION CONTACT: Diana Stram, North Pacific Fishery Management Council; telephone: 907-271-2809.

SUPPLEMENTARY INFORMATION: The meeting agenda consists of the following topics: (1) election of officers; (2) update on the implementation of the crab rationalization plan; and (3) update on prribilof collaborative.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Gail Bendixen at 907-271-2809 at least seven business days prior to the meeting date.

Dated: April 22, 2004.

Alan D. Risenhoover,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Department of the Army

Availability of U.S. Patent and U.S. Patent Applications for Non-Exclusive, Exclusive, or Partially Exclusive Licensing

AGENCY: Department of the Army, DoD.

ACTION: Notice of availability.

SUMMARY: In accordance with 35 U.S.C. 209 and 37 CFR part 404 announcement is made of the availability for licensing of the U.S. Patents for non-exclusive, exclusive, or partially exclusive licensing listed under **SUPPLEMENTARY INFORMATION**. The inventions listed have been assigned to the United States Government as represented by the Secretary of the Army, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Ms. Laura Rothenberg Haug, Chief Counsel, U.S. Army Developmental Test Command, 314 Longs Corner Road, ATTN: CSTE-DTC-CC, Aberdeen

Proving Ground, MD 21005-5055, phone: (410) 278-1059; fax: (410) 278-3733 or e-mail: cc@dtc.army.mil.

SUPPLEMENTARY INFORMATION: 1. Title: "Apparatus for Providing GPS Positioning Information to a Plurality of Computers from only one GPS Receiver."

Description: The present invention comprises an apparatus for providing GPS positioning information to a master computer and a plurality of slave computers from only one GPS receiver. The apparatus includes a circuit adapted to be coupled between the GPS receiver and the computers for providing each computer with a replica of a positioning information signal from the GPS receiver so that each computer receives all of the positioning information it would have received if it had been connected to its own GPS receiver. In addition, the apparatus includes a circuit adapted to be coupled between the GPS receiver and the computers for providing each computer with a replica of a synchronizing signal from the GPS receiver so that each computer receives the synchronizing signal it would have received if it had been connected to its own GPS receiver. Further, the apparatus includes a circuit adapted to be coupled between the GPS receiver and the master computer for passing a control signal from the master computer to the GPS receiver to set up and control the state of the GPS receiver.

Patent Number: 6,674,400.

Issue Date: January 6, 2004.

2. Title: "GPS Tracker."

Description: The present invention comprises a vehicle tracking system that includes a plurality of trackers, each adapted to be attached to a respective movable vehicle, and a remotely located controller for individually polling by radio each of the trackers to determine the position of the polled tracker. Each tracker includes a positioning receiver which receives satellite signals from a Global Positioning System and transmits a first positioning signal containing the position of the tracker to a micro controller unit. The micro controller unit receives the signal and transmits a second positioning signal containing the position of the tracker to a communicator. The communicator radios the second positioning signal to the remotely located controller to communicate the position of the tracker in response to a radioed polling signal from the remotely located controller.

Patent Number: 6,628,232.

Issue Date: September 30, 2003.

3. Title: "Large Dynamic Range Digitizing Apparatus and Method."

Description: The present invention comprises an apparatus and method for digitizing an analog signal and optimizing the dynamic range of the digitized signal. Dual analog-to-digital converters are preceded by respective amplifiers with different gains for receiving an analog input signal. The digital output signal from the analog-to-digital converter preceded by the amplifier of higher gain is selected and stored when it is not clipped. Otherwise, the analog-to-digital converter preceded by the amplifier of lower gain is selected and its digital output signal is stored. Once digital memory is filled, an adaptive formatting program selects the most appropriate parts of the memory words to achieve maximum resolution and dynamic range in an output word size.

Patent Number: 6,445,328.

Issue Date: September 3, 2002.

4. Title: "Equipment Roller/Slide Support."

Description: The present invention comprises a roller slide apparatus for mounting heavy equipment on support structures and which allows safe repositioning of the equipment for servicing and repair includes a lower plate assembly connected to a support structure, an upper mounting plate connected to the equipment, and a bearing assembly connected to both the lower mounting plate assembly and the upper mounting plate for facilitating movement of the upper mounting plate from a first operative position where the upper mounting plate is substantially superimposed over the lower mounting plate assembly to a second operative position where the upper mounting plate is moved away from the lower mounting plate assembly. Locking devices for maintaining the upper mounting plate in either the first or second operative positions, includes flanges formed on the mounting plates and extensions that slide into holes formed in flange or plate elements.

Patent Number: 6,254,047.

Issue Date: July 3, 2001.

5. Title: "System for Detecting Gunshots."

Description: The present invention provides a system for detecting gunshots includes an input device including a microphone for converting acoustic noises into signals and amplifiers for amplifying the input signals, a threshold detector for receiving the amplified signals and comparing the signals with a predetermined threshold value and for producing an output signal when the threshold value is exceeded. A pulse width detector is connected to the threshold detector for producing an output signal only if the width of the

threshold detector output signal is within a predetermined range of values. A pulse count detector is also connected to the threshold detector for producing an output signal when the level of the threshold output signal is above a peak threshold level or the number of threshold level output signals that exceed a threshold level are less than a preset limit. An output device indicates that a gunshot has occurred only when signals are received from the pulse width detector and the pulse count detector during a sampling period.

Patent Number: 6,185,153.

Issue Date: February 6, 2001.

6. Title: "System and Method for Performing Jamming Testing on Communication Networks."

Description: The present invention comprises a system is tested for jamming resistance by supplying a simulated jamming signal. The simulated jamming signal is produced by calculating a propagation path loss in the terrain between the system under test and a location where the jammer would be, predicting a jamming level in accordance with the propagation path loss, and generating a simulated jamming signal. The simulated jamming signal is supplied to the antenna port of the system under test. The testing does not require the use of either a real jammer or a pilot signal generator at the location where the jammer would be.

Patent Number: 5,886,626.

Issue Date: March 23, 1999.

7. Title: "Ballistic Optical Camera Trigger."

Description: The present invention comprises a ballistic optical camera trigger having an integrated circuit capable of converting light to a proportional frequency, wherein the integrated circuit has a fast response time and a wide dynamic range which allows it to sense positive or negative changes in light fast enough to trigger without delay for high speed imaging without computational delays or jitter causing interference. The frequency output of the integrated circuit is tracked by a phase lock loop/voltage controlled oscillator to allow it to follow slow changes in light, but not fast changes in light caused by, for example, a projectile such as a bullet. The frequency output from the integrated circuit is provided to one input of a logic gate which receives at another input thereof, a shaped pulse from the phase lock loop/voltage controlled oscillator circuit, wherein the output of the logic gate is applied to a one-shot for outputting a trigger signal.

Patent Number: 5,581,078.

Issue Date: December 3, 1996.

Brenda S. Bowen,

Alternate Army Federal Register Liaison Officer.

Department of the Army; Corps of Engineers

Notice of Availability of the Draft Environmental Impact Statement for the Va Shly'ay Akimel Ecosystem Restoration Feasibility Study, Maricopa County, AZ

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of availability.

SUMMARY: The Environmental Impact Statement (EIS) addresses foreseeable environmental impacts from measures being investigated to include habitat restoration, channel realignment, and sand and gravel mining quarry pit reshaping within and around the Salt River, Maricopa County, AZ. U.S. Army Corps of Engineers, the Salt River Pima-Maricopa Indian Community (SRPMIC) and the City of Mesa have cooperated in conducting this feasibility study. U.S. Army Corps of Engineers is the lead Federal Agency for this study.

The purpose of the Va Shly'ay Akimel Ecosystem Restoration Study is to produce available riparian ecosystem that will support native wildlife and vegetation, which will improve the overall ecological health of the river and return the project area to a less degraded, more natural condition. The Study resulted in a report recommending that congress authorize a project for implementation by the Corps of Engineers to address the problems and needs of the study area.

Six alternatives, including the no action alternative, are evaluated in the Draft EIS. In general, the primary difference among alternatives is the acreage of each vegetation type and the resulting water necessary to maintain the vegetation. Other differences are the inclusion or exclusion of structural features such as river channelization and bank stabilization.

This study area includes a 14-mile reach of the Salt River within the SRPMIC and City of Mesa, and its upper banks. The SRPMIC and the City of Mesa identified the need for riparian ecosystem restoration and restoration of the river channel functions.

DATES: The draft EIS will be released for public review on or about May 3, 2004.
