

16 line item.<sup>8</sup> Lastly, the commenter indicated that the required public disclosure of the regulatory capital ratios over the planning horizon under different capital rules will cause confusion among bank shareholders and the general public.<sup>9</sup>

The Federal Reserve believes that the proposed additional items to the FR Y-16 would not place an undue burden on \$10–50 billion institutions as they have already been given additional time to incorporate the revised capital framework into their company-run stress tests. The interim final stress test rule on September 30, 2013 specifically provided \$10–50 billion banking organizations with a one-year transition period to incorporate the revised capital framework into their company-run stress tests. The one-year transition period decreased the operational complexity and risk of error for these companies for the initial 2014 stress test cycle by allowing them to focus on implementing stress testing processes without reflecting the revised capital rules over the planning horizon. The one-year transition also allowed companies additional time to evaluate the revised capital framework's effect on their regulatory capital items reported in the Call Report and FR Y-9C. Further, the Call Report and FR Y-9C regulatory capital schedules were revised effective March 2014 to reflect the revised capital framework for regulatory capital items for advanced approaches institutions; all other institutions, including \$10–50 billion institutions, are required to report the same revised regulatory capital schedule for March 31, 2015. In addition, the FR Y-16 reporting form and instructions has been updated to reference the applicable Call Report and FR Y-9C report items that should be reported over the planning horizon, including the new items that were created to capture the revised capital framework. The Federal Reserve will adjust the FR Y-16 schedules to be consistent with the final FR Y-9C and Call Report risk-weighted asset schedule changes once they are published. These adjustments are necessary to align the subcomponents of standardized risk-weighted assets with total standardized risk-weighted assets and will likely alleviate confusion about calculating projected total risk-weighted assets over the planning horizon. Lastly, the public disclosure by companies of the stress

test results using the new capital rules applicable in the projected quarters of the planning horizon is required by the Board's final stress test rule and the Federal Reserve believes that this public disclosure will be informative to the public.

In summary, the Federal Reserve will implement the FR Y-16 data items for the March 2015 report to reflect the revised capital framework as proposed. Specifically, the Federal Reserve will add the common equity tier 1 capital data item to the Balance Sheet Schedule for each scenario and a common equity tier 1 risk-based capital ratio data item to the Summary Schedule and the Balance Sheet Schedule for each scenario. The Office of the Comptroller of the Currency and Federal Deposit Insurance Corporation plan to make similar changes to their \$10–50 billion company Dodd-Frank Act stress test reporting forms (OCC DFAST 10–50 report: OMB No. 1557–0311 and FDIC DFAST 10–50 report OMB No. 3064–0189) to reflect the revised capital framework for the March 2015 report.

#### *B. Technical Changes/Other Items*

In response to a few technical, non-substantive comments received, some additional minor changes will be made in the final reporting form and instructions. These changes include clarified reporting instructions for the disallowed deferred tax asset and unrealized gains (losses) on available-for-sale (AFS) securities line items and updated descriptions of the total capital and total risk-based capital line items.

Board of Governors of the Federal Reserve System, October 20, 2014.
