

To assist in completing the surveys and providing accurate data responses, the hotlines will be using the CDC Federal Telecommunications Service (FTS) 2001 telephone systems; call length data from the Integrated Information Program (IIP), which is a computer interface. The hotlines will also be using the Automated Call Distribution (ACD) program which allows the calls to be distributed to the correct numbers (AIDS or STD) and Symposium software which can assist the hotlines in several areas, including

quickly (1) determining what happened to a call that may be in the queue, (2) compiling a geographic distribution table of all calls throughout the United States, including ages of callers, (3) and routing calls to the English, Spanish or TTY service.

For the AIDS and STD integrated English service, the estimated number of persons surveyed for the active survey is 34,520, and the average active survey length is 72 seconds with a yearly burden of 691 hours. It is estimated that passive surveys are completed on

29,420 calls, and the average passive survey length for completion is 179 seconds, with a yearly burden of 1,463 hours.

Active surveys for the Spanish service for the AIDS Hotline are estimated to be about 5,040 calls with an average active survey length of 88 seconds. The average number of passive surveys estimated for the Spanish service is 5,000. All callers are surveyed from the TTY service and one out of three callers are surveyed from the Spanish service. There is no cost to the respondents.

Respondents	Number of respondents	Number of responses/respondents	Avg Burden/response (in hours)	Total burden (in hours)
AIDS Hotline Calls/English	21,760	1	1/60	363
AIDS Hotline Calls/Spanish	5,040	1	2/60	168
AIDS Hotline Calls/TTY	350	1	7/60	40
STD Hotline Calls/English	12,760	1	1/60	212
Totals	39,910	783

Dated: November 15, 2001.

John Moore,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.
