[IB Docket 06–160; DA 07–25]

Processing Applications in the Direct Broadcast Satellite Service; Feasibility of Reduced Orbital Spacing for Provision of Direct Broadcast Satellite Service in the United States

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; extension of reply comment period.

SUMMARY: On August 18, 2006, the Commission released a Notice of Proposed Rulemaking (71 FR 56923, September 28, 2006) (NPRM) in the proceeding captioned above. The NPRM seeks comment from the public on proposed licensing procedures and service rules for satellites providing Direct Broadcast Satellite (DBS) service. The NPRM also seeks comment on licensing non-nine-degree-spaced DBS applications.

On December 22, 2006, SES Americom, Inc. filed a Motion for Extension of Time, requesting the Commission to extend the reply comment filing deadline in this proceeding. SES Americom, Inc. stated that an extension would enable the parties to the proceeding to provide a more complete record for review, considering the important policy and

technical issues raised in the proceeding.

The Commission concurred that the issues raised in the proceeding are complex, technical, and of great importance to the DBS service and to direct-to-home satellite consumers throughout the United States. Thus, the Commission granted SES Americom, Inc.'s request, and extended the reply comment pleading deadline to January 25, 2007. The Commission stated that the public interest will be served by the extension to enable the filing of a more complete record in this proceeding.

Accordingly, pursuant to section 1.46 of the Commission's rules, 47 CFR 1.46, the request of SES Americom, Inc. is granted.

The deadline for filing reply comments in this proceeding is extended to January 25, 2007.

SUPPLEMENTARY INFORMATION:

Background

In March 1999, NHTSA issued a final rule that established Federal Motor Vehicle Safety Standard No. 225, "Child restraint anchorage systems," which requires motor vehicle manufacturers to

provide motorists with a new means of installing child restraints (64 FR 10786; March 5, 1999) in nearly all new passenger vehicles. The new means, named the "LATCH"¹ system by industry, is a standardized child restraint anchorage system designed to be used exclusively for securing child restraints. Each vehicle LATCH system consists of an upper anchor point (top tether anchor) and two lower anchor points. Each lower anchor point includes a six millimeter (mm) diameter straight rod, or "bar," that is located near the intersection of the seat cushion and seat back ("seat bight") in a recessed position where they will not be felt by seated adult occupants.

Each vehicle with at least two seating positions behind the front seat must have full LATCH systems (consisting of the two rigid lower bars and the top tether anchor) in at least two rear seating positions. If the vehicle has a third rear seating position, the vehicle must also have a top tether anchor at a third rear seating position.

The rule also required child restraint systems manufactured on or after September 1, 2002 to have components capable of attaching to the LATCH system. In addition, the rule required child restraints manufactured after that date to continue to be capable of being attached to a vehicle by way of the vehicle's belt system.

The LATCH system was phased into new vehicles from 1999 to 2002, beginning with the tether anchor in passenger cars in 1999 and ending with full implementation of the LATCH system for passenger cars, multipurpose passenger vehicles (including sport utility vehicles (SUVs) and vans), and light trucks and buses in September 2002.² *Id.*

Implementing LATCH

The agency recognized early on that educating consumers about the new LATCH system would be crucial to the success of the system. After issuing the LATCH final rule, NHTSA met regularly with vehicle and child restraint manufacturers, retailers, and consumer groups on developing public information and marketing strategies to educate consumers about the new LATCH products becoming available on the market, including the correct use of the products. The groups last met in

¹ Lower Anchors and Tethers for Children (LATCH) system.

² NHTSA estimated the benefits of the rule to be 36 to 50 lives saved per year, and 1,231 to 2,929 injuries prevented. Based on an estimated average total annual cost of \$152 million, the cost per equivalent life saved was estimated to be from \$2.1 to \$3.7 million.
