

II. Background

The NRC issues RISs to communicate with stakeholders on a broad range of regulatory matters. This may include communicating staff technical positions on matters that have not been communicated to or are not broadly understood by the nuclear industry. The NRC staff has developed draft RIS 2014–XX, “Applicability of ASME Code Case N–770–1 As Conditioned In 10 CFR 50.55a, “Codes and Standards,” To Branch Connection Butt Welds,” to inform addresses about reactor coolant system Alloy 82/182 branch connection dissimilar metal nozzle welds that may be of a butt weld configuration and therefore require inspection under 10 CFR 50.55a(g)(6)(ii)(F). The RIS, if issued in final form, would be used by all holders of an operating license or construction permit for a pressurized water nuclear power reactor under 10 CFR Part 50, “Domestic Licensing of Production and Utilization Facilities,” except those who have permanently ceased operations and have certified that fuel has been permanently removed from the reactor vessel. The draft RIS explains that these entities should review this information for applicability to their Alloy 600 management plan to ensure all applicable butt welds are being inspected.
