

runway at the Mojave Airport. Concept B launch vehicles would use suborbital trajectories and, therefore, would not reach Earth orbit. Concept B launch vehicles would launch and land horizontally at the Mojave Airport. They would not require runway lengths in excess of existing infrastructure at the Mojave Airport.

Two alternatives to the proposed action were considered in the Draft EA/Initial Study. The first alternative would be to issue a launch site operator license to the EKAD for the Mojave Airport for inclusion of launch vehicles specifically fitting the description of Concept A. The second alternative would be to issue a launch site operator license to the EKAD for the Mojave Airport for inclusion of launch vehicles specifically fitting the description of Concept B.

Potential impacts of the proposed action and alternatives were analyzed in the Draft EA/Initial Study. Potential environmental impacts of successful launches include impacts to air quality, airspace, biological resources, cultural resources, health and safety, hazardous materials and hazardous waste, geology and soils, land use, noise, socioeconomics and environmental justice, transportation, visual and aesthetic resources, and water resources. The impacts of the No Action Alternative would be the same as those described for the affected environment in the Draft EA/Initial Study.

Potential cumulative impacts of the operation of the proposed launch site are also addressed in the Draft EA/Initial Study.
