

contains reasonable and prudent measures with implementing terms and conditions to minimize the effects of this take. This IHA action is within the scope of the previously analyzed action and does not change the action in a manner that was not considered previously.

### National Environmental Policy Act

In 2005, NMFS prepared an Environmental Assessment (EA) on the Issuance of Authorizations to Take Marine Mammals, by Harassment, Incidental to Naval Explosive Ordnance Disposal School Training Operations at Eglin Air Force Base, Florida and subsequently issued a Finding of No Significant Impact (FONSI). This IHA action is within the scope of the previously analyzed action and does not change the action in a manner that was not considered previously. Therefore, preparation of an EIS on this action is not required by NEPA or its implementing regulations. However, in 2007, a supplemental EA was prepared to address new information on the effects to EFH and cumulative impacts to the physical and biological environment from other EAFB activities.

### Conclusions

NMFS has issued an IHA to the Air Force for the NEODS training missions to take place at EAFB over a 1-year period. The issuance of this IHA is contingent upon adherence to the previously mentioned mitigation, monitoring, and reporting requirements. NMFS has determined that the NEODS training, which entails up to six missions per year, including up to five live detonations per mission of approximately 5-lb (2.3 kg) net explosive weight charges to occur in approximately 60-foot (18 m) deep water from one to three nm off shore, will result in the Level B harassment of Atlantic bottlenose dolphins and Atlantic spotted dolphins (less than 0.0002 percent of the population for each species, and perhaps 1–2 percent of an inshore stock of bottlenose dolphin, if one of them were harassed) and will have a negligible impact on these marine mammal species and stocks. While behavioral modifications may be made by Atlantic bottlenose dolphins and Atlantic spotted dolphins to avoid the resultant acoustic stimuli, when the potential density of dolphins in the area and the required mitigation and monitoring are taken into consideration NMFS does expect any injury or mortality to result. The effects of the NEODS training are expected to be limited to short-term and localized TTS-related behavioral changes. No

rookeries, mating grounds, areas of concentrated feeding, or other areas of special significance for marine mammals occur within or near the NEODS test sites.

### Authorization

As a result of these determinations, NMFS proposes to issue an IHA to the Air Force for NEODS training operations at EAFB, Florida, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
