The proposed anonymous, web-based COVID-19 Behavioral Health Surveillance survey will provide unit-level and service-wide information about the effects of the pandemic on Sailors and Marines. Unit commanders will be provided with critical

information about specific COVID-19 related challenges service members face so that they can employ strategies to mitigate the harms associated with the pandemic. The survey asks about a range of issues related to the COVID-19 pandemic, including its effects on service members' ability to effectively perform their duties, home life and relationships, preventative health behaviors, and mental/behavioral health and readiness.

The surveillance effort will involve an initial assessment, which may be followed by a 6-month follow-up assessment using the same survey. It will be possible to use data resulting from repeated surveillance to determine changes over time in unit-level health and readiness.
