To provide these data, each research facility must assess the potential for animal pain or distress associated with the proposed procedures. This assessment is performed prospectively (*i.e.,* before the procedure) and typically forms the basis for the pain and distress report provided by the facility to USDA. The assessment, therefore, is an estimate based on professional judgment, knowledge, and experience, and the resulting report may or may not accurately reflect the conditions the animals actually experience. The research facility can, as an option, retrospectively (*i.e.,* during or after the procedure) assess the animal pain and distress observed and report these results. We do not know how often facilities perform retrospective reporting.

There is no provision in the current classification system to address some areas identified by the research community and animal advocacy groups. For example, the current system does not include a means to report:

- An assessment of the relative intensity or duration of pain or distress either observed in the animal or anticipated to be experienced by the animal;
- An assessment of the anticipated or observed efficacy of the pain- or distress-relieving agent provided to animals undergoing a painful or distressful procedure;
- A distinction between procedures causing animal pain and procedures causing animal distress;
- Animals that were prevented from experiencing pain or distress by the appropriate and effective use of pain- or distress-relieving methods or procedures (*e.g.,* well-anesthetized animals that undergo terminal surgery);
- Animals that did not experience pain or distress due to the appropriate and effective use of pain- or distress-relieving methods or procedures other than anesthetic, analgesic, or tranquilizing agents;
- Animals that experience unrelieved pain or distress for a reason other than that the use of anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, experiments, surgery, or tests; or
- Animals that experience pain or distress without having been used in a procedure (*e.g.,* illness in animals that have been genetically altered to develop disease).

We are aware of several alternative pain and distress classification systems. For example, the system adopted by the Canadian Council on Animal Care, ''Categories of Invasiveness in Animal Experiments,'' may be viewed on the Internet at http://www.ccac.ca/english/categ.htm. The system proposed by the Humane Society of the United States may be viewed on the Internet at http://hsus.org/programs/research/usda_proposed_scale.html.[1] Other classification systems, varying greatly in complexity, are in use in other countries, such as Switzerland and Sweden.

Modifying the current USDA system, in lieu of replacing it, could also be an option. This could involve replacing or redefining the existing categories to:

- Separately report pain and distress;
- Quantify pain and distress intensity and duration;
- Separately classify anesthetized or otherwise treated animals undergoing potentially painful procedures but not experiencing pain or distress; or
- Modify the system in other ways.

We invite your comments on adding a definition for distress to the regulations and replacing or modifying our animal pain and distress classification system. We are particularly interested in soliciting comments addressing the following questions:

1. Would adding a definition for distress to the regulations help institutions using animals for research, testing, or teaching better recognize, minimize, and report animal distress?
2. If a definition for distress is added to the regulations, what key elements should be included in that definition?
3. What are the benefits and limitations of our pain and distress classification system?
4. Should our animal pain and distress classification system be modified or replaced? If so, what specific modifications or alternate classification systems should we consider?
5. Should animal pain and distress be prospectively or retrospectively reported?

Written comments should be submitted within the 60-day comment period specified in this document (see **DATES** and **ADDRESSES**).

Executive Order 12866

This action has been reviewed under Executive Order 12866. The action has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

BILLING CODE 3410–34–P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 54

[Docket No. PRM–54–1]

Union of Concerned Scientists; Receipt of Petition for Rulemaking

AGENCY: Nuclear Regulatory Commission.

ACTION: Petition for rulemaking; Notice of receipt.

SUMMARY: The Nuclear Regulatory Commission (NRC) has received and requests public comment on a petition for rulemaking filed by the Union of Concerned Scientists (petitioner). The petition has been docketed by the Commission and has been assigned Docket No. PRM–54–1. The petitioner requests that the NRC regulations governing requirements for renewal of operating licenses for nuclear power plants be amended to address potential concerns about aging degradation of liquid and gaseous radioactive waste systems. The petitioner believes the degradation from aging of piping and components of liquid and gaseous radioactive waste systems at nuclear power facilities may result in an increased probability and/or consequences from design and licensing bases events.

DATES: Submit comments by September 25, 2000. Comments received after this date will be considered if it is practical to do so, but assurance of consideration cannot be given except as to comments received on or before this date.

ADDRESSES: Submit comments to: Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Attention: Rulemaking and Adjudications staff.

Deliver comments to 11555 Rockville Pike, Rockville, Maryland, between 7:30 am and 4:15 pm on Federal workdays.

For a copy of the petition, write: David L. Meyer, Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. Documents related to this action

are available for public inspection at the NRC Public Document Room (PDR) located at the Gelman Building, 2012 L Street, NW, Washington, DC 20555. Documents created or received at the NRC after November 1, 1999 are also available electronically at the NRC's Public Electronic Reading Room on the Internet at *http://www.nrc.gov/NRC/ADAMS/index.html.* From this site, the public can gain entry into the NRC's Agencywide Document Access and Management System (ADAMS), which provides text and image files of NRC's public documents. For more information, contact the NRC Public Document Room (PDR) Reference staff at 1–800–397–4209, or 202–634–3273, or by email to *pdr@nrc.gov.*

You may also provide comments via the NRC's interactive rulemaking website through the NRC home page (*http://ruleforum.llnl.gov*). This site provides the availability to view and upload comments as files (any format), if your web browser supports that function. For information about the interactive rulemaking website, contact Ms. Carol Gallagher, (301) 415–5905 (e-mail: CAG@nrc.gov).

FOR FURTHER INFORMATION CONTACT: David L. Meyer, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Telephone: 301–415–7162 or Toll Free: 1–800–368–5642 or E-mail: DLM1@NRC.GOV.

SUPPLEMENTARY INFORMATION:

Background

The Nuclear Regulatory Commission received a petition for rulemaking dated May 3, 2000, submitted by the Union of Concerned Scientists (petitioner). The petitioner requests that the regulations governing renewal of operating licenses for nuclear power plants in 10 CFR parts 51 and 54 be amended to address potential concerns relating to degradation through aging of piping and components of liquid and gaseous radioactive waste systems at operating nuclear power plants. This petition was included as part of a document in which the petitioner details concerns related to the review of the license renewal application submitted by the owner of the Hatch Nuclear Plant. Specifically, the petitioner is concerned that the license renewal application for the Hatch facility has not addressed deficiencies it believes exists in the aging management of the liquid and gaseous radioactive waste (radwaste) systems. The petitioner concludes that the requirements pertaining to renewal of operating licenses for nuclear power plants do not adequately address degradation from aging of liquid and gaseous radioactive waste systems. The petitioner requests that the regulations in 10 CFR part 51 and part 54 be amended to clarify that liquid and gaseous radioactive waste systems must be covered by aging management programs during license renewal periods.

The NRC has determined that the petition meets the threshold sufficiency requirements for a petition for rulemaking under 10 CFR 2.802. The petition has been docketed as PRM–54–1. The NRC is soliciting public comment on the petition for rulemaking.

Discussion of the Petition

The petitioner states that in 10 CFR part 51, appendix B to subpart A, ''Environmental Effect of Renewing the Operating License of a Nuclear Power Plant,'' the NRC concluded that radiation exposures to the public and occupational exposures to workers during the license renewal term will continue at levels below regulatory limits. The petitioner believes that this conclusion is based on an assumption that the piping and components of the liquid and gaseous radioactive waste systems at nuclear power plants do not experience greater failure rates during the license renewal term.

Using the case of a recent license renewal application, the petitioner cites the Hatch Nuclear Plant as an example in contending that the plant is being operated outside its design and licensing bases because the material condition of piping and components of the liquid (Contention No. 1) and gaseous (Contention No. 2) radioactive waste systems are not being properly inspected and maintained. In its request for a generic communication by the NRC to all nuclear power plant owners about potential aging degradation of liquid and gaseous radioactive waste systems, the petitioner indicates that the Millstone facility received an Information Notice in 1979 regarding liquid radwaste system problems that the petitioner believes was ignored. The petitioner notes that in 1996 the Millstone facility received another Information Notice also regarding degradation problems with the liquid radwaste system.

The petitioner believes that from its review of the license renewal applications submitted by the owners of the Calvert Cliffs, Oconee, and Hatch facilities, it appears that 10 CFR 54.4(a)(1)(iii) has been interpreted to exclude the liquid and gaseous radioactive waste systems from aging management consideration. The petitioner requests that NRC amend 10 CFR parts 51 and 54 to clarify that the liquid and gaseous radioactive waste systems must be covered by aging management programs during the license renewal term. The petitioner believes that regulations imposing aging management for these systems are necessary to ensure that these systems do not experience greater failure rates that could result in an increased probability and/or consequences from design bases events.

The Petitioner's Conclusions

The petitioner has concluded that the NRC requirements governing renewal of operating licenses of nuclear power facilities do not adequately address degradation that may result from aging of liquid and gaseous radioactive waste systems. The petitioner has also concluded that the degradation by aging of these systems may result in an increased probability of adverse consequences from design and licensing bases events. The petitioner requests that the regulations in 10 CFR part 54 and part 51, if appropriate, be amended to clarify that liquid and gaseous radwaste systems must be covered by aging management programs during the license renewal term of an operating nuclear power facility.

Dated at Rockville, Maryland, this 3rd day of July, 2000.

For the Nuclear Regulatory Commission.

Andrew L. Bates,

Acting Secretary of the Commission.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99–NM–365–AD]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 767 Series Airplanes Powered by Pratt & Whitney Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Boeing Model 767 series airplanes powered by Pratt & Whitney engines. This proposal would require modification of the nacelle strut and wing structure. This action is necessary to prevent fatigue cracking in primary
