SUPPLEMENTARY INFORMATION:

I. Discussion

NUREG–1757, Volume 2, Revision 2 “Consolidated Decommissioning Guidance, Characterization, Survey, and Determination of Radiological Criteria” (ML22194A859) was revised to address lessons learned and experience gained from review of license termination plans, decommissioning plans, and final status surveys for licensees undergoing license termination. The NUREG was updated to include new guidance related to dose modeling, as low as reasonably achievable criteria, surface

water and groundwater characterization, use of engineered barriers, and radiological surveys (e.g., composite sampling, subsurface surveys, and surveys demonstrating indistinguishability from background).

Following issuance of NUREG–1757, Volume 2, Revision 2, NRC staff intends to develop interim staff guidance to address issues raised during the public comment period related to: (i) subsurface investigations; and guidance or communications related to (ii) discrete radioactive particles. NRC staff held two subsurface investigations workshops on July 14–15, 2021, and May 11, 2022, to support the development of interim staff guidance. A public workshop to support development of guidance or communications on discrete radioactive particles is planned for November 3, 2022. Additional details regarding the November 3, 2022, workshop, will be forthcoming.

The regulatory analysis for Revision 2 of NUREG–1757, “Consolidated Decommissioning Guidance,” Volume 2, “Characterization, Survey, and Determination of Radiological Criteria” is available in ADAMS under ML21347A957.

II. Additional Information

Draft NUREG–1757, Volume 2, Revision 2 “Consolidated Decommissioning Guidance, Characterization, Survey, and Determination of Radiological Criteria” was published in the **Federal Register** (85 FR 79044) on December 8, 2020, with a 60-day comment period. On January 22, 2021, (86 FR 6683) the NRC decided to extend the comment period until April 8, 2021. Over 200 comments were received on the draft document and the NRC staff’s evaluation and resolution of the public comments are documented in ADAMS under ML21299A032. NRC staff addressed the public comments in the final version of the document.

III. Congressional Review Act

NUREG–1757, Volume 2, Revision 2, is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act. The Congressional Review Act Summary is available in ADAMS under ML21349B406.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, NRC Form 664, "General Licensee Registration." The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on February 18, 2022 (87 FR 9396).

1. *The title of the information collection*: NRC Form 664, "General Licensee Registration."
2. *OMB approval number*: 3150-0198.
3. *Type of submission*: Extension.
4. *The form number, if applicable*: NRC Form 664.
5. *How often the collection is required or requested*: Annually.
6. *Who will be required or asked to respond*: General licensees who possess registerable quantities of byproduct material.
7. *The estimated number of annual responses*: 409.
8. *The estimated number of annual respondents*: 460.
9. *The estimated number of hours needed annually to comply with the information collection requirement or request*: 136.

10. *Abstract*: NRC Form 664 is used by NRC general licensees to make reports regarding certain generally licensed devices subject to annual registration. The registration program allows NRC to better track general licensees, so that they can be contacted or inspected as necessary, and to make sure that generally licensed devices can be identified even if lost or damaged. Also, the registration program ensures that general licensees are aware of and understand the requirements for the possession, use, and disposal of devices containing byproduct material. Greater awareness helps to ensure that general licensees will comply with the regulatory requirements for proper handling and disposal of generally licensed devices and would reduce the potential for incidents that could result in unnecessary radiation exposure to the public and contamination of property.

Dated: July 19, 2022.

NRC Clearance Officer, Office of the Chief Information Officer.
