

increase in link unavailability as a short-term interference protection criterion.

The relevant rule for purposes of this revised information collection is 47 CFR 25.261(d).

The new information collection requirements in this collection are needed to determine the technical qualifications of licensees and market access grantees to operate an NGSO FSS space station and to determine whether operations under an NGSO FSS authorization serve the public interest, convenience and necessity. Without such information, the Commission could not determine whether to permit respondents to provide communications services in the United States because it could not assure that incumbent NGSO FSS licensees and market access grantees are adequately protected from radiofrequency interference that could be caused by NGSO FSS satellite systems authorized through a later processing round. Therefore, the Commission would not be able to fulfill its statutory responsibilities in accordance with the Communications Act of 1934, as amended, and the obligations imposed on parties to the World Trade Organization Basic Telecom Agreement.
