from CY 2020 to CY 2021, and such that no area has a factor less than one. For PHAs operating in multiple FMR areas, HUD calculates a voucher-weighted average inflation factor based on the count of vouchers in each FMR area administered by the PHA as captured in HUD administrative data as of December 31, 2020.

III. The Use of Inflation Factors

HUD subsequently applies the calculated individual area inflation factors to eligible renewal funding for each PHA based on VMS leasing and cost data for the prior calendar year.

IV. Geographic Areas and Area Definitions

As explained above, inflation factors based on area FMR changes are produced for all FMR areas and applied to eligible renewal funding for each PHA. The tables showing the RFIFs, available electronically from the HUD data information page, list the inflation factors for each FMR area on a state-bystate basis. The inflation factors use the same OMB metropolitan area definitions, as revised by HUD, that are used in the FY 2021 FMRs. PHAs should refer to the Area Definitions Table on the following web page to make certain that they are referencing the correct inflation factors: http:// www.huduser.org/portal/datasets/rfif/ FY2021/FY2021 RFIF FMR AREA REPORT.pdf. The Area Definitions Table lists areas in alphabetical order by state, and the counties associated with each area. In the six New England states, the listings are for counties or parts of counties as defined by towns or cities. HUD is also releasing the data in Microsoft Excel format to assist users who may wish to use these data in other calculations. The Excel file is available at https://www.huduser.gov/portal/ datasets/rfif/rfif.html. Note that, as described earlier, the actual renewal funding inflation factor applied to agency funding will be the voucherweighted average of the FMR area factors when the PHA operates in multiple areas.
