

schedule requires monitoring twice monthly for the first six months, and, if the affected source has test results less than 50 percent of the sulfur limit, then twice a year, during the first and third calendar quarters, as long as the affected source maintains compliance.

Abstract for [0200080]:

Q1: Will EPA allow Mirant Kendall to measure NO_x, SO₂, and PM for the new natural gas unit number 4 at the HRSG outlet instead of upstream and downstream of the duct burner during the subpart GG and subpart Da initial performance test? Can Kendall use Method 20 instead of Method 7E for the initial performance test?

A1: Yes, EPA has determined that in these specific cases the proposed alternatives to the test methods and sampling points will continue to ensure compliance with the emission limits.

Q2: Will EPA allow a custom CEMS QA/QC regimen?

A2: Yes, EPA has determined that in these specific cases the proposed alternative to the CEMS QA/QC requirements will continue to ensure compliance with the emission limits.

Abstract for [0200081]:

Q: Is the use of an adsorber and incinerator an acceptable alternate control system for subpart NNN and subpart RRR affected facilities?

A: Yes. Use of the control system and the proposed procedures for monitoring and ensuring proper operation and maintenance are acceptable.

Abstract for [0200082]:

Q: A refinery has process area reactors and distillation columns whose only gas streams are combusted in the refinery's fuel gas system. These gas streams are exempt from any compliance monitoring requirements under 40 CFR part 63, subpart G. Does 40 CFR 63.110(d)(10) also exempt those gas streams from the requirements of NSPS subparts NNN and RRR?

A: No. Section 63.110(d)(10) does not exempt the gas streams from meeting the requirements of NSPS subparts NNN and RRR.

Abstract for [0200083]:

Q: Are electric arc furnaces in steel forging plants regulated by subparts AA and AAa?

A: If a plant manufactures a product that comes from a mold and that product, as it comes out from the mold, is modified by rolling, forging, hot or cold working to alter its shape, the furnaces are regulated.

Abstract for [0200084]:

Q: Is outdated pharmaceutical waste considered an industrial waste that would make an incinerator a Commercial and Industrial Solid Waste Incineration (CISWI) Unit?

A: No. As the waste in question is from a warehouse, it is a municipal waste and, as a result, the unit is not subject to the CISWI regulations.

Abstract for [0200085]:

Q: For purposes of NSPS subpart H, what portions of a facility containing both sulfuric acid and liquid sulfur dioxide operations constitute a sulfuric acid plant?

A: On the basis of the information provided on this particular facility, only the sulfuric acid operations constitute a sulfuric acid plant under subpart H.

Abstract for [0200086]:

Q: A facility mines and crushes argillite and then fires it in kilns to produce lightweight aggregate. Are the lightweight aggregate product crushers/grinders, conveyors, screeners, and storage bins which follow the kilns subject to subpart OOO?

A: Yes. Even if no crushing or grinding takes place after the kilns, the subsequent material handling equipment would still be subject to subpart OOO as it is part of the nonmetallic mineral production line in which crushing and grinding of raw material takes place. The lightweight aggregate product is a nonmetallic mineral. The facility should also consider the potential applicability of subpart UUU to specific operations at the facility.

Abstract for [0200087]:

Q: Should facilities subject to NSPS subpart OOO submit routine reports to the appropriate agency with delegated authority for implementing the regulation, instead of EPA Region 4?

A: Yes. Facilities subject to NSPS subpart OOO only need to submit routine reports to the appropriate agency with delegated authority for implementing the regulation. There is no need to submit the reports to EPA Region 4.

Abstract for [0200088]:

Q: A facility crushes and grinds clay and then deposits it onto a storage pile. The clay is later removed from the storage pile and transferred by a conveyor to brick manufacturing equipment in a making room. Is the conveyor subject to subpart OOO?

A: No. The conveyor is not an affected facility in a production line at a nonmetallic mineral processing plant.

Dated: February 4, 2003.

Michael M. Stahl,

Director, Office of Compliance.
