In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. All filings must clearly identify the project name and docket number on the first page: Lake Algonquin Hydroelectric Project (P-7274-035).

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application has been accepted for filing but is not ready for environmental analysis at this time.

l. The Lake Algonquin Hydroelectric Project consists of the following facilities: (1) a 239-foot-long, 26.5-foot-high concrete gravity dam composed of an ogee spillway section at each end and a gated spillway section in the middle with three steel 19-foot-wide by 12-foot-high vertical lift roller gates; (2) an impoundment with a surface area of 275 acres and a storage capacity of 2,557 acre-feet at an elevation of 986.84 feet National Geodetic Vertical Datum of 1929; (3) two dikes/low points along the reservoir rim; (4) a 27-foot-high, 21-foot-wide, 52-foot-long intake structure; (5) a buried 10-foot-diameter, 113-foot-long steel penstock; (6) a 25-foot-wide, 63-foot-long concrete, steel, and masonry powerhouse containing one turbine-generator unit with a rated capacity of 698 kilowatts; (7) a 480-volt, 65-foot-long generator lead; (8) a 480-volt/4.8-kilovolt (kV) step-up transformer; (9) a 4.8-kV, approximately 50-foot-long overhead transmission line; and (10) appurtenant facilities.

A continuous minimum flow of 20 cubic feet per second or inflow, whichever is less, is passed into the bypassed reach through a minimum flow pipe in the spillway. All flows greater than turbine capacity pass over the spillway and/or through the dam gates. Project operation ceases when inflow falls below the minimum hydraulic capacity, and all flow is passed over the dam into the bypassed reach. The average annual generation is estimated to be 1,363 megawatt-hours.

o. *Scoping Process:* Pursuant to the National Environmental Policy Act (NEPA), Commission staff intends to prepare either an environmental assessment (EA) or an environmental impact statement (EIS) (collectively referred to as the "NEPA document") that describes and evaluates the probable effects, including an assessment of the site-specific and cumulative effects, if any, of the proposed action and alternatives. The Commission's scoping process will help determine the required level of analysis and satisfy the NEPA scoping requirements, irrespective of whether the Commission issues an EA or an EIS. At this time, we do not anticipate holding an on-site scoping meeting. Instead, we are soliciting written comments and suggestions on the preliminary list of issues and alternatives to be addressed in the NEPA document, as described in
