Q: Does the EPA determine that the stationary reciprocating internal combustion engines (RICE) participating in two Duke Energy Carolinas nonresidential demand response programs meet the definition of “emergency stationary RICE” in the National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (“RICE NESHAP”)?

A: No. The EPA determines that the terms of Duke’s demand response programs do not meet all of the operational limits on emergency engines in the RICE NESHAP. The terms of the programs are consistent with the limitations on emergency demand response. However, an engine must also comply with the definition of “emergency stationary RICE” and all of the operational restrictions in 40 CFR 63.6640(f) to be considered RICE NESHAP emergency engines.

Q1: Has EPA Method 1 been removed from the reciprocating internal combustion engine (RICE) NESHAP subpart ZZZZ, or should the engines at Farabee Mechanical in Hickman, Nebraska (Farabee) be following Method 1 for test port locations.

A1: No. EPA Method 1 of 40 CFR part 60 Appendix A from the RICE NESHAP should be followed for test port locations. The EPA response letter provides guidance for numerous testing scenarios under NESHAP subpart ZZZZ sources including engines where Method 1 is required but the testing ports do not meet the minimum criteria of Method 1 and engines that are not required to use Method 1 procedures.

Q2: Is there any conflict with the RICE NESHAP subpart ZZZZ rule if utilizing test ports at engines for testing purposes?

A2: No. The Farabee Mechanical facility was approved to use single-point sampling at NSPS subpart JJJJ sources in lieu of Method 1 for their engines. Single point sampling without a stratification test for nitrogen oxide emissions using Alternative Test Method 87 is allowed under 40 CFR 60, Subparts IIII and JJJJ. However, single point sampling for carbon monoxide at NESHAP subpart ZZZZ sources have not yet been broadly approved. Therefore, when Method 1 is not met, a stratification test is to be conducted to show if the site is acceptable to perform the test.

Q: Does the EPA approve the use of the results of a particulate matter emission test conducted on December 2014 for two new wood-fired boilers at Norwich University in Northfield, Vermont that are subject to the requirements of 40 CFR part 63 subpart JJJJJ as being representative of “initial conditions” because the first test, conducted in February 2014, was not conducted under normal operating conditions?

A: Yes. The EPA approves the use of emissions test data from the second test as meeting the requirements of 40 CFR 63.11220(b) since it is representative of normal operating conditions, and therefore Norwich University may avoid the requirement to test particulate matter every three years.

Q: Does the EPA accept the proposal by Tyson Foods Inc. to use a louvered door system, where the louvers would only open inward and would only open when negative pressure is in place, to meet the work practice requirements in 40 CFR part 63 subpart DDDDDDD, National Emissions Standards for Hazardous Air Pollutants for Area Sources: Prepared Feeds Manufacturing (Prepared Feeds Area Source Rule), to keep exterior doors in the immediate affected areas shut except during normal ingress and egress, as practicable?

A: Yes. The EPA determines that the use of the louvered door system would meet the requirements of subpart DDDDDDD. The louvered door system described would maintain the function of the closed doors by only opening the louvers to the interior of the building when the doors are under negative pressure, drawing air into the building. Under these conditions the doors would be serving the purpose of minimizing the release of prepared feed dust emissions to the outside, which is the intent of the work practice standard in Section 63.11621(a)(1)(iii).

### SUPPLEMENTARY INFORMATION:

#### A. Need For and Use of the Information Collection

The Federal Home Loan Bank System consists of eleven regional Federal Home Loan Banks (Banks) and the Office of Finance (a joint office that issues and services the Banks' debt securities). The Banks are wholesale financial institutions, organized under authority of the Federal Home Loan Bank Act (Bank Act) to serve the public interest by enhancing the availability of residential housing finance and community lending credit through their member institutions and, to a limited extent, through certain eligible nonmembers. Each Bank is structured as a regional cooperative that is owned and controlled by member institutions located within its district, which are also its primary customers. An institution that is eligible for membership in a particular Bank must purchase and hold a prescribed minimum amount of the Bank's capital stock in order to become and remain a member of that Bank. With limited exceptions, only an institution that is a member of a Bank may obtain access to low cost secured loans, known as
