

to allow the use of the minimum days off requirements discussed in 10 CFR 26.205(d)(4) for a 60-day period starting on May 1, 2022 (following the current 60-day outage period that began on March 1, 2022). While the exemption is in effect, TVA will also implement alternate work hour controls for Category A personnel, as discussed in Section V of Enclosure 1 to their submittal letter dated April 15, 2022. The exemption for Category A personnel shall end either at the end of the approved 60-day period (not to exceed June 29, 2022) or at the time when Watts Bar, Unit 2, is connected to the electrical grid, whichever occurs first.

The Commission hereby grants Tennessee Valley Authority a one-time exemption from 10 CFR 26.205(d)(7) for Category B personnel (*i.e.*, those individuals performing normal outage shutdown, startup, maintenance, fuel handling, and modification activities, who are covered by 10 CFR 26.4(a)(1), (a)(2), and (a)(4), and are not directly related to the SGR project) to allow the use of the work minimum day off requirements discussed in 10 CFR 26.205(d)(4) for a 60-day period that shall begin upon completion of Schedule Milestone SGM0184 (*i.e.*, turnover of the polar crane from SGR project team to the TVA outage team). This 60-day period may be extended for each individual subject to the exemption in 7-day increments for each non-overlapping 7-day period the individual has worked not more than 48 hours during the 60-day period as described in 10 CFR 26.205(d)(6). Following the conclusion of the 60-day period for a given individual, normal (non-outage) work hour controls, in accordance with requirements of 10 CFR 26.205(d)(7), shall resume for that individual. The exemption for Category B personnel shall end when Watts Bar, Unit 2, is connected to the electrical grid.

II. Discussion

On December 14, 2021, the NRC solicited comments on its draft ISG, "Safety Review of Light-Water Power-Reactor Construction Permit Applications." The purpose of this ISG is to clarify existing guidance and to assist the NRC staff in determining whether an application to construct a light-water power-reactor facility meets the minimum requirements to issue a construction permit. The public comment period closed on January 28, 2022. The NRC has decided to reopen the public comment period on this document until May 23, 2022 to receive comments on two topics addressed by comments submitted during the initial comment period.

III. Comments Requested

In considering the comments submitted during the initial comment period, the NRC staff noted two topics that would benefit from additional public feedback and consideration before the ISG is issued final. The NRC staff requests public comments on the following questions:

1. If the NRC were to develop an acceptance review template for light-water power-reactor construction permit applications, what specific information should the template provide that is not currently available in the draft ISG or the NRC's primary review guidance for a construction permit application, NUREG-0800, "Standard Review Plan for the Review of Safety Analysis Reports for Nuclear Power Plants: [Light-Water Reactor] Edition?"
2. Are there specific review areas where the draft ISG requests a level of detail in the construction permit application that is inconsistent with previous construction permit applications? If so, which specific review areas are involved and how is the level of detail inconsistent with previous construction permit applications?

Comments in response to these questions and on the draft ISG should be submitted in accordance with the instructions described in Section I.B.

Dated: May 2, 2022.

Director, Division of New and Renewed Licenses, Office of Nuclear Reactor Regulation.
