Pursuant to section 3506(c)(2)(A) of the PRA, the EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. The EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, the EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Steel Pickling, HCl Process Facilities and Hydrochloric Acid Regeneration Plants (40 CFR part 63, subpart CCC) were proposed on September 18, 1997, promulgated on June 22, 1999, and amended on September 19, 2012 and November 19,

2020. This rule applies to all facilities that pickle steel using hydrochloric acid (HCl) or regenerate hydrochloric acid and are either major sources or part of a facility that is a major source. This regulation does not apply to any pickling line that uses an acid other than hydrochloric acid or an acid solution containing either less than 6 percent hydrochloric acid or at a temperature less than 100 °F. New facilities include those that commenced construction or reconstruction after the date of proposal. In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. This information is being collected to assure compliance with 40 CFR part 63, subpart CCC.

Form Numbers: None.

Respondents/affected entities: Steel pickling, HCl process facilities and hydrochloric acid regeneration plants.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart CCC).

Estimated number of respondents: 100 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 35,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$4,140,000 (per year), includes \$10,600 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is no change in burden from the most recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. This is due to two considerations. First, the regulations have not changed over the past three years and are not anticipated to change over the next three years. Second, the growth rate for this industry is very low or non-existent, so there is no significant change in the overall burden. Since there are no changes in the regulatory requirements and there is no significant industry growth, there are also no changes in the capital/startup or operation and maintenance (O&M) costs. This ICR also adjusts the number of responses from the currently approved ICR to account for the submittal of periodic test reports; this corrects the annual average hours per

response but the burden to respondents does not change.

Courtney Kerwin,

Director, Regulatory Support Division.
