Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

The draft appendices to NUREG/BR–0058, Revision 5 address guidance enhancements for further consideration that were identified in SECY–14–0143, “Regulatory Gap Analysis of the Nuclear Regulatory Commission's Cost-Benefit Regulations, Guidance, and Practices,” and incorporates pertinent information from NUREG/BR–0184.

Appendix F, “Data Sources,” provides guidance on the processes needed to collect and analyze data, as well as data types, sources, and adjustment techniques. It also (1) identifies sources of information that can be collected to support data analysis activities, (2) describes various methods of adjusting raw data to establish a common basis, and (3) discusses the importance of collecting historical cost and non-cost data to support parametric estimating techniques.

Appendix G, “Regulatory Analysis Methods and Data for Nuclear Facilities Other Than Power Reactors,” documents established approaches and data considerations for use in performing non-power reactor regulatory analyses. This appendix provides supplemental information for performing a regulatory analysis for non-power reactor facilities and activities, including fuel fabrication facilities, independent spent fuel storage installations, irradiators, high-level waste repositories, and uses of byproduct material.

Appendix H, “Severe Accident Risk Analysis,” provides guidance and best

practices recommended for use in performing probabilistic risk assessments and consequence analyses as part of regulatory and backfit analyses for nuclear power reactors. This appendix expands upon guidance regarding the safety goal evaluation and valuation of public health (accident) and economic consequences (offsite property) attributes. It provides references on sources of information and an overview of the tools and methods used to estimate changes in core damage frequency, large early release frequency, public health risk, and offsite economic consequences risk.

Appendix I, “National Environmental Policy Act Cost-Benefit Analysis,” describes the methods to be used in preparing cost-benefit analyses in support of the NRC’s regulatory and licensing actions conducted under the National Environmental Policy Act, including evaluations of severe accident mitigation alternatives and severe accident mitigation design alternatives.
