This eliminates the need to independently track entries against the Maternal and Child Health Bureau's limits for each section and ensures compliance. The electronic system includes forms status checker and data alerts, which conduct automated checks on data validity, data

consistency, and application completeness, as well as value tolerance checks. This facilitates application review and eliminates much of previously required data cleaning activity. Also, this allows the user to obtain an immediate update at any point in time on the completeness and compliance of the application, reducing the need to conduct a review of the application. Data are saved directly to

the HRSA server so that no manual transmission is required. Finally, the automatic commitment of data to the HRSA server eliminates the need for version control or data migration.
