Port Access Route Study: The Atlantic Coast From Maine to Florida

AGENCY: Coast Guard, DHS.

ACTION: Notice of study; request for comments.

SUMMARY: In order to provide safe access routes for the movement of vessel traffic proceeding to or from ports or places along the eastern seaboard of the United States, the Coast Guard is conducting a Port Access Route Study (PARS) to evaluate the continued applicability of, and the need for modifications to, current vessel routing measures. The data gathered during this Atlantic Coast PARS may result in establishment of one or more new vessel routing measures, modification of existing routing measures, or disestablishment of existing routing measures off the Atlantic Coast between Maine and Florida. The goal of the Atlantic Coast PARS is to enhance navigational safety by examining existing shipping routes and waterway uses, and, to the extent practicable, reconciling the paramount right of navigation within designated port access routes with other reasonable waterway uses such as the leasing of outer continental shelf blocks for the construction and operation of offshore renewable energy facilities. The recommendations of the study may lead to future rulemaking action or appropriate international agreements.
