

which otherwise have been built with, or improved to include, the technology that produces the market-preferred tobacco. The certification program will be administered by Stabilization. County FSA offices will be requested to cooperate by marking the producer's marketing card (MQ-76) with the notation "NO CERTIFICATION" for any farm failing to provide a certification to Stabilization. Individual lots of tobacco will be stamped "NO CERTIFICATION" at the auction warehouse. All tobacco with a "NO CERTIFICATION" designation will receive the lower price support loan value. Further announcements will be made as needed to implement this change. It is expected that several announcements would be made by press release or other less formal means of communications. To repeat: this value will not be based on either a positive or negative determination regarding indirect heating but a market value determination as part of the government's function of setting price support differentials. It should also be understood that if the market value of the tobacco is indeed reduced but no change was made in the differentials, not only would there be loan losses but also, because of those losses, it would be necessary to increase tobacco assessments to cover such losses, as required by the 1949 Act. Such assessments could be considerable.

Signed at Washington, DC., on September 17, 2001.

James R. Little,

Acting Administrator Farm Service Agency and, Acting Executive Vice President Commodity Credit Corporation.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Waquoit Bay National Estuarine Research Reserve: Notice of Approval and Availability on Revised Management Plan

AGENCY: Office of Ocean and Coastal Resource Management, National Ocean Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce.

ACTION: Notice of Approval and Availability of the Final Revised Management Plan for the Waquoit Bay National Estuarine Research Reserve.

SUMMARY: Notice is hereby given that the Estuarine Reserves Division (ERD), Office of Ocean and Coastal Resource Management, has approved the revised management plan for the Waquoit Bay National Estuarine Research Reserve (WBNERR). The WBNERR was designated in 1989 and has been operating under a management plan approved in 1989. Pursuant to section 921.33(c) of the National Estuarine Research System implementing regulations, a state must revise its management plan at least every five years, or more often if necessary.

The revisions to the WBNERR management plan include:

- The renovation of the headquarters site and its structures to provide a support base for the administrative, research and education activities of the Reserve;
- The significant increase in staff and the concomitant increase in activities

undertaken under the auspices of the Reserve;

- The proposed acquisition boundary which describes the Reserve's plans to expand its boundary. It also describes lands that may be acquired for incorporation into the Reserve boundary. The approval of this management plan officially incorporates the Quashnet River parcel and the Great Flat Pond into the Reserve boundary. The proposed acquisition boundary describes the Reserve's plans to pursue for acquisition approximately 1,250 acres of unprotected areas in the Waquoit Bay watershed that coincides with the Mashpee National Wildlife Refuge's acquisition boundary.

- The incorporation of the Massachusetts Department of Environmental Management's Guidelines for Operations and Land Stewardship (GOALS);

- The exhibits at the visitor center, which significantly increases visitation to the Reserve; and

- Modifications to the Reserve's advisory committee structure that reflect the maturation of the Reserve and its needs at this stage of operations.

The revised management plan demonstrates continued strong support from the Massachusetts Department of Environmental Management (DEM) and NOAA for research, monitoring and education programs. A long-term research plan focuses on understanding the structure and function of key habitats, such as the Reserve's five major marsh systems. A comparative ecology approach provides the basis for research project design and priority setting. Collaborative studies with Federal, state, and institutional researchers are encouraged. An associated long-term monitoring program will characterize the environmental quality and the occurrence and abundance of living resources. Monitoring is designed to determine baseline status and trends in habitat quality and the health of important resource species.
