

toxicity. No cumulative effects are expected with other substances.

F. Safety Determination

1. *U.S. population.* The lack of toxicity of phospholipid is demonstrated by the above summary. Based on this information, the aggregate exposure to phospholipid over a lifetime should not pose appreciable risks to human health. There is a reasonable certainty that no harm will result from aggregate exposure to phospholipid residues. Exempting phospholipid from the requirement of a temporary tolerance should be considered safe and pose insignificant risk.

Egg solids are widely used in food products. In dried egg yolk, 2% of the lipids are Lyso-PE.

2. *Infants and children.* Egg yolks are used in a variety of foods including baby food and infant formula. Lyso-PE is also present in human breast milk. There is a reasonable certainty that no harm will result to infants and children from aggregate exposure to phospholipid residues.

G. Effects on the Immune and Endocrine Systems

Nutra-Park Inc. has no information to suggest that phospholipid will adversely affect the immune or endocrine systems.

H. Existing Tolerances

A temporary tolerance exemption on apples, citrus, cranberries, grapes, nectarines, peaches, pears, strawberries and tomatoes in conjunction with Experimental Use Permits for lysophosphatidylethanolamine is currently in effect (63 FR 32131) June 12, 1998, and has been extended to June 2003.

I. International Tolerances

Nutra-Park Inc. is not aware of any international tolerances of this biochemical.
