#### Government-Owned Inventions; Availability for Licensing

**AGENCY:** National Institutes of Health, Public Health Service, HHS.

**ACTION:** Notice.

**SUMMARY:** The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious

commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

**ADDRESSES:** Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852-3804; telephone: 301/496-7057; fax: 301/402-0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

#### Cell Based Immunotherapy

*Description of Technology:* The invention hereby offered for licensing is in the field of Immunotherapy and more specifically in therapy of autoimmune diseases such as Type I diabetes, multiple sclerosis, rheumatoid arthritis and systemic lupus erythematosus and immune mediated allergies such as asthma as well as in transplantation-related disorders, such as graft acceptance and graft-versus-host-disease (GVHD).

While the role of FOXP3+ regulatory T cells (Tregs) in the maintenance of self-tolerance and immune homeostasis has been established and thus their use in adoptive immunotherapy has been contemplated, there is still no good way to purify and expand these cells in an efficient and reproducible manner ex vivo for use in human therapy. The subject invention provides a method that allows such purification for use in expansion cultures to generate sufficient numbers of cells and purity for cell-based immunotherapy. The method is based on the finding that Tregs selectively express Latency Associated Peptide (LAP) and CD121b (IL-1 Receptor Type 2) and on the ability to selectively separate these cells from other immune cells that are potentially hazardous, through the use of magnetic particles which specifically bind to either one of these two surface molecules and selectively separate those cells from the non-Tregs.

#### Applications:

Immunotherapy, primarily for autoimmune diseases such as Type I diabetes, hematologic disorders such as aplastic anemia, transplantation-related disorders, such as graft acceptance and graft-versus-host-disease (GVHD) and allergic diseases such as asthma.

Facilitating detailed studies and analysis of human Treg function in health and disease.
