

Data range, consistency and edit checks are automatically programmed to reduce reporting error, survey length, and maintain the flow of information processing. Data cross checks also help reduce the burden by ensuring that the reporting is consistent within each trip.

Data retrieval is based upon materials provided to participants as shown below.

Travel Log Materials

Travel Log Packet. The travel log packet will include a letter, an exemplar log, and personalized travel logs for each age eligible person in the household, and will be sent using first class postage in a 6" x 9" envelope. The envelopes will be branded to match the letterhead used for the invitation letter. The second respondent incentive will be included with the travel logs. This \$5 cash incentive is expected to serve as a "good faith" incentive to encourage completion of the retrieval survey.

Travel Log Letter. A household letter will be included in the travel log packet. The letter will further familiarize the participants with the travel recording stage, identify the households' travel date and provide details about when and how to complete the retrieval survey. The letter will also remind participants about the final \$20 household incentive. Like the invitation letter, the travel log letter will be branded.

Travel Logs. A personalized travel log will be provided for each household member (ages 5 and older). The logs are intended to be a memory jogger to guide accurate data collection and aid in the reporting of each place visited on the travel day.

Exemplar Log. Participants will be provided with an exemplar log with the instructions for recording the details about the places visited on the travel day.

All web and computer assisted telephone interview (CATI) instruments will be reviewed for section 508 compliance using the rules specified in sections 1194.22—"Web-based intranet and internet information and applications" and 1194.23—"Telecommunications products." All materials will be available in both English and Spanish language forms. Spanish translations will be developed using industry standards and will apply reverse-translation protocols.

Estimated Burden Hours for Information Collection

Frequency: This collection will be conducted every 5–7 years.

Respondents. A stratified random sample of 26,000 households across the

50 states and the District of Columbia will be included in the survey. Household will include an average of 2.5 members for a total of 65,000 individual respondents to the main survey.

Estimated Average Burden per Response. It will take approximately 5 minutes per household member to complete the recruitment data form, and 20 minutes to complete the retrieval survey. This results in a total of 25 minutes per household member.

Estimated Total Annual Burden Hours. It is estimated that a total of 65,000 persons will be included in the survey. This would result in approximately 27,083 hours of support for this data collection effort.
