

Madden Deep Unit, approximately 300 wells may be drilled; and within the Iron Horse Unit, approximately 420 wells may be drilled.

Infrastructure required to support gas production would include: Well pads; water wells; gathering, treating, processing and compression facilities; water injection and evaporation facilities; electric powerlines; roads; gas flow lines; and pipelines. Gas would be transported through pipelines to centralized compression and treatment facilities.

Produced water would be reinjected in some instances, and disposed of through the use of surface facilities in other instances. Major issues identified at this time include: potential impacts to air quality; disposal of produced waste water; and potential effects of development and production on surface resources including vegetation and wildlife habitat.
