

if issued: "On all future captures at least one person must remain in an attending vessel near the trap until all animals can be handled and released into the wild. Should there be future events of uncontrollable highly aggressive fighting among animals in the trap, the animals must be released immediately to preclude mortality of individual animals."

Permit 1409 issued to Karen G. Holloway-Adkins authorizes take of 100 green sea turtles (*Chelonia mydas*) and 10 loggerhead sea turtles (*Caretta caretta*) annually for scientific research. Turtles are captured, handled, measured, weighed, flipper and PIT tagged, and lavaged. The purpose of the research is to characterize turtle aggregations using the nearshore reefs in central Brevard County, FL as developmental habitat, and to provide information on turtle size class, foraging habitats, and movements.

The permit holder has requested a modification to the permit to allow sonic tags to be attached to 15 green sea turtles, a subset of the turtles already authorized to be taken, to determine distribution and seasonal movements of turtles in nearshore reefs in Brevard County.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the marine mammal application to the Marine Mammal Commission and its Committee of Scientific Advisors.
