#### **1. Abstract**

The National Survey of College Graduates (NSCG), formerly called the National Survey of Natural and Social Scientists and Engineers, has been conducted biennially since the 1970's. The 2008 NSCG will consist of a sample of 2006 NSCG respondents under age 76 with at least one bachelor's, master's degree, or foreign doctorate in science, engineering or health field, and/or work in science and engineering or related occupations. The purpose of this longitudinal panel study is to provide national estimates on the science and engineering workforce and changes in employment, education and demographic characteristics. The study is one of three components of the Scientists and Engineers Statistical Data System (SESTAT), which produces national estimates of the size and characteristics of the nation's science and engineering population.

The National Science Foundation Act of 1950, as subsequently amended, includes a statutory charge to “\* \* \* provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources, and to provide a source of information for policy formulation by other agencies of the Federal Government.” The NSCG is designed to comply with these mandates by providing information on the supply and utilization of the nation's scientists and engineers. Collected data will be used to produce estimates of the characteristics of these individuals. They will also provide necessary input into the SESTAT labor force data system, which produces national estimates of the size and characteristics of the country's science and engineering population.

The Foundation uses this information to prepare congressionally mandated reports such as *Women, Minorities and Persons with Disabilities in Science and Engineering and Science and*

*Engineering Indicators*. A public release file of the SESTAT data (which includes the NSCG data) designed to protect respondent confidentiality will be made available to researchers on CD-ROM and on the World Wide Web.

The Bureau of the Census, as in the past, will conduct the study for NSF. Data will be obtained by mail questionnaire and computer-assisted telephone interviews beginning in October 2008. The survey will be collected in conformance with the Confidential Information Protection and Statistical Efficiency Act of 2002, and the individual's response to the survey is voluntary. NSF and Bureau of the Census will insure that all information collected will be kept strictly confidential and will be used only for statistical purposes.

#### **2. Expected Respondents**

A statistical sample of approximately 60,000 persons, identified as having at least a bachelor's degree and having a degree and/or occupation in science, engineering, or health, will be contacted.

#### **3. Burden on the Public**

The amount of time to complete the questionnaire may vary depending on an individual's circumstances; however, on average it will take approximately 25 minutes to complete the survey. NSF estimates that the total annual burden will be 25,000 hours during the 2008 survey cycle.
