

crews from receiving doses greater than those allowed by regulatory limits.

The use of up to sixteen casks per shipment would not change the total number of spent fuel casks or elements that will be accepted by DOE over the term of the acceptance program. Because the total number of spent fuel casks to be accepted remains the same, and the incident free and accident risks of transporting up to sixteen casks would not be materially different from the risks of transporting eight casks, DOE has concluded that the impacts from shipping up to sixteen casks on a single vessel, and subsequent train or truck shipments, would be within the bounds of potential environmental impacts discussed in the Final EIS. Further, adding up to eight more casks per shipment whenever possible would better promote the commitment set forth in the Record of Decision to reduce the number of spent fuel shipments.

For the reasons set forth above, Section VII ("Decision"), Paragraph A, of the Record of Decision issued on May 13, 1996, is revised to read as follows:

A. DOE will reduce the number of shipments necessary by coordinating shipments from several reactors at a time (*i.e.*, by placing multiple casks [up to sixteen] on a ship). DOE currently estimates that a maximum of approximately 150 to 300 shipments through the Charleston Naval Weapons Station and five shipments through the Concord Naval Weapons Station will be necessary during the 13 year spent fuel acceptance period.

In addition, Section VIII ("Use of All Practicable Means to Avoid or Minimize Harm"), Paragraph C of the Record of Decision is revised to read as follows:

C. DOE will reduce the risk associated with shipment of the spent fuel by shipping multiple casks per shipment, up to a maximum of sixteen, whenever possible, thus reducing the total number of shipments.

Issued in Washington, D.C., this 10th day of July, 2000.
