k. *Description of Filing:* The Avista Corporation does not intend to seek a subsequent license for the Lolo Line because the transmission line is not a primary line subject to the Commission's jurisdiction. As originally licensed, FERC Project No. 2261 consists of a 231-kV transmission line known as the Lolo-Divide Creek Transmission Line, extending from the Lolo substation approximately 43 miles to Divide Creek, where it connects with a similar line originating at the Oxbow Plant of Idaho Power Company's Hells Canyon Project No. 1971. The filing concludes that the Lolo Line is no longer a primary line, as defined by § 3(11), 16 U.S.C. 796(11) of the Federal Power Act, and is not required to be licensed by the Commission.

When a request for Jurisdiction Review is filed with the Federal Energy Regulatory Commission, the Federal Power Act requires the Commission to investigate and determine if the interests of interstate or foreign commerce would be affected by the project. The Commission also determines whether or not the project: (1) Would be located on a navigable waterway; (2) would occupy or affect public lands or reservations of the United States; (3) would utilize surplus water or water power from a government dam; or (4) if applicable, has involved or would involve any construction subsequent to 1935 that may have increased or would increase the project's head or generating capacity, or have otherwise significantly

modified the project's pre-1935 design or operation.
