National Institute on Aging; Alzheimer's Disease Neuroimaging Initiative

The National Institute on Aging (NIA) is announcing a meeting for the development of a neuroimaging initiative for Alzheimer's disease (AD) that will take place June 17-18, 2002 at the Hyatt Hotel, One Bethesda Metro Center, Bethesda, MD. The goal of this initiative is to foster a public-private collaboration for the development of longitudinal studies that will identify the neuroimaging modalities and techniques most appropriate for following elderly people as they develop mild cognitive impairment (MCI) and AD. In addition to providing natural history information, neuroimaging markers may allow early identification of individuals who may benefit from emerging preventive and treatment medications, provide a way of monitoring treatment efficacy and mechanism, and serve as surrogate endpoints in clinical trials.

Meeting participants will include representatives from academia, the Food and Drug Administration, pharmaceutical companies, imaging device companies, NIH staff, and advocacy groups. Presentations at the meeting will evaluate currently existing resources and knowledge regarding neuroimaging in MCI and AD by examining available clinical, neuropsychological, laboratory, and imaging data from prior natural history and epidemiology studies and clinical
