SUPPLEMENTARY INFORMATION:

Title of Collection: Survey of Earned Doctorates.

OMB Control Number: 3145-0019.

Expiration Date of Current Approval: May 31, 2026.

Type of Request: Intent to seek approval to extend an information collection for three years.

Abstract: Established within the NSF by the America COMPETES Reauthorization Act of 2010 section 505, codified in the NSF Act of 1950, as amended, the National Center for Science and Engineering Statistics (NCSES) serves as a central Federal clearinghouse for the collection, interpretation, analysis, and dissemination of objective data on science, engineering, technology, and research and development for use by practitioners, researchers, policymakers, and the public.

The Survey of Earned Doctorates (SED) is part of NCSES' survey system that collects data on individuals to provide information on science and engineering education and careers in the United States. The SED has been conducted annually since 1958 and is jointly sponsored by four Federal agencies (NSF/NCSES, National Institutes of Health, U.S. Department of Education/National Center for Education Statistics, and National Endowment for the Humanities) to avoid duplication of effort in collecting such data. It is an accurate, timely source of information on one of our

Nation's most important resources—highly educated individuals. This request to extend the information collection for three years is to cover the 2026 and 2027 SED survey cycles.

Data are obtained via Web survey from each person earning a research doctorate at the time they receive the degree. Data are collected on their field of specialty, educational background, sources of support in graduate school, debt level, postgraduation plans, and demographic characteristics. NCSES publishes statistics from the survey in several reports. The survey will be collected in conformance with the Privacy Act of 1974. Responses from individuals are voluntary. NCSES will ensure that all individually identifiable information collected will be kept strictly confidential and will be used only for research or statistical purposes.

Use of the Information: The Federal Government, universities, researchers, policy makers, and others use the information extensively. Results from the SED are used to assess characteristics of the doctorate population and trends in doctoral education and degrees. Data from the survey are published annually on the NCSES website in a publication series reporting on all fields of study, titled *Doctorate Recipients from U.S. Universities* (<https://www.nsf.gov/statistics/doctorates>). Information from the SED is also included in other series available online: *Science and Engineering Indicators* (<https://nces.nsf.gov/indicators>); and *Women, Minorities, and Persons with Disabilities in Science and Engineering* (<https://www.nsf.gov/statistics/women>). In addition, access to tabular data from selected variables is available through the NCSES online data tool (<https://ncesdata.nsf.gov/builder/sed>) and the SED Restricted Data System (<https://ncesdata.nsf.gov/rdas>).

Expected Respondents: The SED is a census of all individuals receiving a research doctorate from an accredited U.S. academic institution in the academic year beginning 1 July and ending 30 June of the subsequent year. As such, the population for the 2026 SED consists of all individuals receiving a research doctorate in the 12-month period beginning 1 July 2025 and ending 30 June 2026. Likewise, the population for the 2027 SED consists of all individuals receiving a research doctorate in the 12-month period beginning 1 July 2026 and ending 30 June 2027. A research doctorate is a doctoral degree that (1) requires completion of an original intellectual contribution in the form of a dissertation or an equivalent
