the east abutment and oriented in a northwest-southwest direction; (3) a reservoir (Lake Housatonic) with a normal maximum water surface elevation of 25.2 feet NGVD 88 and a usable storage capacity of 500 acre-feet; (4) a gatehouse (Derby gatehouse); (5) a gatehouse (Shelton gatehouse) and 130foot-long, 94-foot-wide headrace channel extending downstream from the dam; (6) a navigation lock located at the west abutment, which constitutes the first 70 feet of the Shelton canal; (7) a powerhouse (Shelton powerhouse) at the west abutment, in the existing Shelton canal and lock structure, and located approximately 130 feet downstream of the Shelton gatehouse, containing two horizontal A-C tube Kaplan turbines with two direct drive generators with a total rated capacity of 7.8 megawatts (MW) and a rated flow of 4,600 cubic feet per second; (8) a 775foot-long, 13.8 kilovolt underwater transmission line tying into the existing United Illuminating Company system; and (9) appurtenant facilities.

The current license requires the implementation of an August 5, 1987 recreation plan that includes: (1) fishing access with an information kiosk downstream of the dam on the east shoreline; (2) fishing access with an information kiosk at the project's tailrace (west shoreline); (3) canoe portage and associated warning signs at the project's tailrace; (4) an information

kiosk at the entrance to the project; and (5) picnic tables and benches with scenic views of the river.

The current license requires the project to operate in a run-of-river mode such that outflow from the project approximates inflow to the impoundment. The project bypasses approximately 350 feet of the Housatonic River. The average annual generation of the project was approximately 25,147 megawatt-hours from 2006 through 2016.

McCallum and Shelton propose to continue operating the project in a runof-river mode. McCallum and Shelton also propose to: (1) develop an operation monitoring plan; (2) develop an impoundment refill plan; (3) install and operate an upstream fish passage facility with an automated fish lift; (4) install a new 0.4-MW minimum flow turbine within the upstream fish passage facility; (5) develop a fishway operation and maintenance plan; (6) install and operate one or more upstream eel passage facilities; (7) install and operate a downstream fish passage facility; (8) install a seasonal 0.75-inch partial depth trashrack overlay; and (9) implement downstream eel passage measures.
