

style, sample size, and descriptions to AMS to revise the standard. The petition was derived from a consensus of the dried fig industry.

Proposed by Fruit and Vegetable Programs, AMS

A notice proposing changes to the United States Standards for Dried Figs based on the petition was published in the May 9, 2001, **Federal Register** (66 FR 23662). AMS received three comments in response to the notice. Responses were received from California Fig Advisory Board, and two growers. All responses were in favor of the revisions. One grower had requested some further changes to the standard that were not addressed in the original petition, including an additional increase in the moisture tolerance and the inclusion of an additional style. Therefore additional changes should be addressed in a new petition. Based on the submitted information and petition, AMS is revising the standard for dried figs following the standard format for U.S. Grade Standards.

The grade of a sample unit of dried figs is ascertained by considering the factors of varietal characteristics, size, moisture, and flavor and odor which are not scored; the ratings for the factors of color, uniformity of size, defects, and maturity and development, which are scored; the total score; and the limiting rules which apply.

Accordingly, this proposal would establish grade levels "A", "B" and "Substandard" with corresponding score points assigned for each level. Tolerances for each quality factor for each grade level are established. These changes will bring the standard for dried figs in line with present quality levels being marketed today and provide guidance in the effective utilization of dried figs.

AMS believes that revisions to the standard are needed to meet the needs of industry and that these changes will allow for a better marketing environment for all dried fig producers.

This revision becomes effective 30 days after the date of publication of this notice in the **Federal Register**.
