

documentation throughout the life cycle of an aerospace vehicle system or component.

“Mitigating Radiation Effects on Current and Future Avionics Systems”—To develop a set of guidelines to mitigate atmospheric radiation effects on current and future aircraft avionics systems and electronics devices.

“Methods to Account for Accelerated Semiconductor Device Wear Out”—To develop methods to evaluate mechanisms and accommodate the effects of accelerated semiconductor device wear out on avionics system design, production and support. This also includes developing methods to account for shorter lifetimes in avionics system safety and reliability analysis.

“Thermal Management of COTS Based Avionics”—To investigate methods to determine and satisfy thermal management requirements for avionics systems using current and future commercial off the shelf components and assemblies. This includes investigating new cooling techniques using both analytical and experimental methods to evaluate tradeoffs between functional and environmental control system requirements.
