BILLING CODE 4710-05-P

TENNESSEE VALLEY AUTHORITY

Supplemental Environmental Impact Statement: Completion of Watts Bar Nuclear Plant Unit 2

AGENCY: Tennessee Valley Authority.

ACTION: Notice of Intent.

SUMMARY: This notice is provided in accordance with the Council on Environmental Quality's (CEQ) regulations (40 CFR parts 1500-1508) and TVA's procedures for implementing the National Environmental Policy Act. The Tennessee Valley Authority (TVA) will prepare a Supplemental Environmental Impact Statement (EIS) to update information and address the potential environmental impacts associated with its proposal to complete the Watts Bar Nuclear Plant (WBN) Unit 2 located in Rhea County, Tennessee. Completion of WBN Unit 2 would help address the need for additional baseload generation in the power service area of

the Tennessee Valley Authority and make use of that unfinished asset.

DATES: Comments on the draft Supplemental EIS will be invited from the public. It is anticipated that the draft Supplemental EIS will be available in the spring of 2007.

ADDRESSES: Information about the Supplemental EIS process can be obtained by contacting Bruce L. Yeager, NEPA Program Manager, NEPA Policy, Environmental Stewardship and Policy, Tennessee Valley Authority, 400 West Summit Hill Drive, Mail Stop WT 11B-K, Knoxville, Tennessee 37902 (e-mail: blyeager@tva.gov).

FOR FURTHER INFORMATION CONTACT:

James Chardos, Project Manager, Nuclear Generation Development at Tennessee Valley Authority, Mail Stop ADM 1V-WBN, Chattanooga, Tennessee 37402 (e-mail: jschardos@tva.gov).

SUPPLEMENTARY INFORMATION: TVA operates the largest public power system in the country. It provides electricity to more than 8.5 million people in parts of seven southeastern states. It also serves 650,000 businesses and industries in this region, including 61 large industrial and federal facilities. TVA currently has 33,000 megawatts of dependable generating capacity on its system. This capacity consists of three nuclear plants, 11 coal-fired plants, six combustion-turbine plants, 29 hydroelectric dams, one pump-storage facility, the southeast's largest wind turbine installation, and one methane-gas capture facility. Slightly more than 60 percent of TVA's installed generating capacity is coal, almost 30 percent is nuclear, and the remaining 10 percent is hydro and other renewable energy resources and combustion turbines.

Demand for electricity in the TVA Power Service Area is growing at the rate of approximately 2 percent per year. In 2005, demand for electricity from the TVA system exceeded the previous all-time high demand (peak demand) on the system twice. To meet this growing demand TVA anticipates having to add additional baseload capacity to its system by no later than the 2012-2014 timeframe. Completing TVA's partially-constructed WBN Unit 2 would not only help meet this growing need for generation but also make use of that unfinished asset. TVA is further supplementing the original 1972 Environmental Statement for the plant and updating pertinent information discussed and evaluated in the related documents identified below to inform decision makers about the potential for environmental impacts that would be associated with a decision to complete and operate WBN Unit 2. On July 28,

2006, the TVA Board of Directors also authorized staff to conduct a comprehensive Detailed, Scoping, Estimating and Planning (DSEP) study to evaluate the cost and schedule for completing WBN Unit 2.

WBN is located on 1,700 acres at the northern end of Chickamauga Reservoir about 8 miles from Spring City, Tennessee. The Atomic Energy Commission (AEC) issued construction permits (now the responsibility of the Nuclear Regulatory Commission (NRC)) for the two-unit, 2,540 MW plant in January of 1973. In 1985, TVA halted construction activities for WBN in order to address safety concerns. Due to these construction delays, WBN Unit 1 did not begin commercial operation until May 1996. The plant currently has one Westinghouse pressurized-water reactor with a capacity of 1,167 megawatts—enough electricity to supply about 650,000 homes a day. WBN Unit 2 was approximately 60 percent complete when construction was halted in 1985.

Summary of Relevant Environmental Reviews

In 1972, TVA released a Final EIS that reviewed the potential environmental and socioeconomic impacts of constructing and operating the two-unit plant (WBN Units 1 and 2). TVA updated the WBN EIS in November 1976 and submitted additional environmental information and analyses to NRC in an Environmental Information Supplement in 1977. In December of 1978, NRC issued its Final EIS, NUREG-0498 related to the licensing of the two-unit plant.

In 1993, TVA conducted a thorough review of the TVA and NRC documents to determine if additional environmental review was needed to inform decisions about whether or not to complete WBN Units 1 and 2. The 1993 TVA review, focusing on ten sections of the earlier documents, concluded that neither the plant design nor environmental conditions had changed in a manner that materially altered the environmental impact analysis set forth in the earlier EIS. In 1994, TVA provided additional analyses and information in support of NRC's issuance of a Supplemental EIS. That Supplemental EIS, issued by NRC in 1995, similarly concluded that there were no significant changes in the potential environmental impacts of WBN 1 and 2 since the 1978 Final Environmental Statement issued by the NRC. Following independent review of the adequacy of the analyses and document, in July of 1995 TVA adopted the 1995 NRC final Supplemental EIS for the completion of WBN Unit 1. In
