Background

The National Toxicology Program (NTP) in facilitating the “Roadmap for the 21st Century” (available at <http://ntp.niehs.nih.gov/go/vision>) is interested in identifying or developing rapid, mechanism-based predictive screening assays for use in toxicity determinations. Through its High Throughput Screening (HTS) Initiative (<http://ntp.niehs.nih.gov/go/hts>), the NTP is collaborating with the U.S. Environmental Protection Agency (EPA) ToxCast Program (<http://epa.gov/ncct/toxcast/>) and the National Human Genome Research Institute’s NIH Chemical Genomics Center (NCGC) (<http://www.ncgc.nih.gov/index.html>) to investigate the application of HTS approaches for defining toxicity profiles of environmental compounds to use in hazard identification and risk assessment.
