k. *Description of Request:* Southern California Edison Company requests a temporary variance of its minimum reservoir elevation requirement of Shaver Lake, pursuant to Article 37 (c) of the license. Southern California Edison requests to completely dewater the Shaver Lake Reservoir from October 1, 2011 to April 30, 2012, to facilitate the installation of a geomembrane liner on the bottom half of the upstream face of Shaver Dam. Southern California Edison Company proposes to drain Shaver Lake to natural stream flow by way of the low level outlet valve on the dam and tunnel five through Powerhouse No. 2A. The millpond cofferdam used when Shaver Lake was filled in 1927 may be used to impound some water but because it is so old, inflatable cofferdams will be used if necessary to insure the construction site remains dewatered.

Southern California Edison Company states in its temporary variance request that as the lake is drawn down, daily inspections will be performed to determine the impact on fish species as well as conducting fish rescues if stranding is found. Once lake levels have stabilized, a qualified biologist will survey the area four times as week to collect and record any fish mortality. Any fish mortality that occurred during the dewatering of the lake will be replaced.
