SUPPLEMENTARY INFORMATION: The DEIS/GMP analyzes four (4) alternatives a no-action and three action alternatives including the National Park Service proposal. Alternative C, the proposed General Management Plan would retain most existing visitor experiences and would improve outreach programs, visitor orientation, collaborative research partnership opportunities, and

administrative staff services. It also provides for enhanced protection for facilities and resources from flooding. Alternative B would protect and preserve the fort's historic setting and historic viewscape and would minimize modern intrusions in the historic core area. Alternative D would broaden the interpretive themes to highlight the more complex role of Fort Davis in the history of the American West. Under the no-action alternative, existing administrative, maintenance, land use, and resource management activities would continue with current use serving as the basis for mapping management prescriptions.

The DEIS/GMP in particular evaluates the environmental consequences of the proposed action and the other alternatives on visitor experience, archeological resources, cultural landscapes and historic resources, long-term health of natural ecosystems, economic contribution to local communities, adjacent landowners, and facility/operational efficiency. The plan also identifies cumulative effects on wetlands and floodplains for the National Park Service proposal.
