Establishing Federal Acquisition  
Regulation Part 40**

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Final rule.

**SUMMARY:** DoD, GSA, and NASA are issuing a final rule amending the

Federal Acquisition Regulation (FAR) to add the framework for a new FAR part on information security and supply chain security. The creation of this new FAR part does not implement any of the information security and supply chain security policies or procedures. The amendment simply establishes the new FAR part.

**SUPPLEMENTARY INFORMATION:**

**I. Background**

DoD, GSA, and NASA are amending the FAR to add the framework for a new FAR part 40, which will contain the policies and procedures for managing information security and supply chain security when acquiring products and services. The creation of this new FAR part does not implement any of the policies or procedures related to managing information security and supply chain security. The rule simply establishes the new FAR part. Relocation of the related existing policies or procedures will be done through separate rulemaking.

Currently, the policies and procedures for prohibitions, exclusions, supply chain risk information sharing, and safeguarding information that address security objectives are dispersed across multiple parts of the FAR, which makes it difficult for the acquisition workforce to locate, understand, and implement applicable requirements. This new part will provide contracting officers with a single, consolidated location in the FAR that addresses their role in implementing requirements related to managing information security and supply chain security when acquiring products and services. This is also helpful to contractors who may want to review the information security and supply chain security policies and procedures in FAR part 40.

This part will provide a location to cover broad security requirements that apply across acquisitions. These include security requirements designed to bolster national security through the management of existing or potential adversary-based supply chain risk across technological, intent-based, or economic means (e.g., cybersecurity supply chain risks, foreign-based risks,
