SUPPLEMENTARY INFORMATION: The BLS Behavioral Science Research Center (BSRC) conducts theoretical, applied, and evaluative research aimed at improving the quality of data collected and published by the Bureau. Since its creation in 1988, the BSRC has advanced the study of survey methods research, approaching issues of nonsampling error within a framework that draws heavily on the theories and methods of the cognitive, statistical, and social sciences. The BSRC research focuses primarily on the assessment of survey instrument design and survey administration, as well as on issues related to interviewer training, the interaction between interviewer and respondent in the interview process, and the usability of data-collection instruments by both interviewers and respondents. Improvements in these areas result in greater accuracy and response rates of BLS surveys, frequently reduce costs in training and survey administration, and further ensure the effectiveness of the Bureau's overall mission. clearance by the BSRC is to conduct cognitive and psychological research designed to enhance the quality of the Bureau's data collection procedures and overall data management.

The BLS is committed to producing the most accurate and complete data within the highest quality assurance guidelines. The BSRC was created to aid in this effort and it has demonstrated the effectiveness and value of its approach. As the use of web-based surveys continues to grow, so too will the need for careful tests of instrument design and usability, human-computer interactions, and the impact of multiple modes on data quality. The BSRC is uniquely equipped with both the skills and facilities to accommodate these demands.

The extension of this information collection reflects an attempt to accommodate the increasing interest by BLS program offices and other agencies in the methods used and the results obtained by the BSRC. This extension also reflects planned research and development activities for FY2021 through FY2023. The collection's approval will enable the continued productivity of a state-of-the-art, multidisciplinary program of behavioral science research to improve BLS survey methodology.

For additional substantive information about this ICR, see the related notice published in the **Federal Register** on October 9, 2020 (85 FR 64168).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number.
